# State and Federal Land Inventory

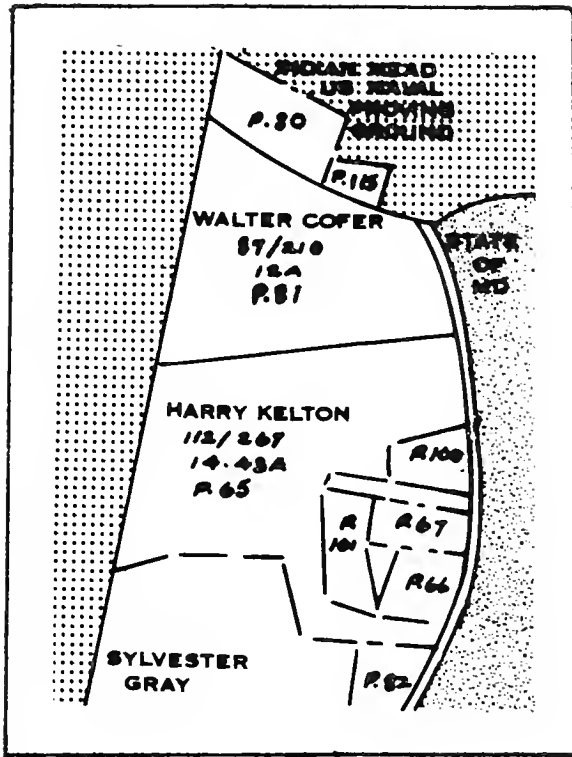

Maryland Department of State Planning

technical series  
GENERALIZED LAND USE PLAN

august 1974

Extensive use was made of a variety of available public records to compile this inventory. Every effort was made to identify and correct errors and inconsistencies embodied in the source data. Through the use of this material we hope the reader will be in a position to identify any remaining inconsistencies and refer their occurrence to the Department. The Department will make every effort to correct future tabulations and have the source data verified.

TITLE: State and Federally Owned Lands, Technical Report

AUTHOR: Maryland Department of State Planning

SUBJECT: State and Federally Owned Lands As A Suitability Factor  
In The Maryland Generalized Land Use Plan

DATE: April, 1974

PLANNING AGENCY: Maryland Department of State Planning

SOURCE OF COPIES: Maryland Department of State Planning

HUD PROJECT NUMBER: Md - P - 1008

NUMBER OF PAGES: 68

#### ABSTRACT

This publication has been prepared as part of the land suitability analysis of the Maryland Generalized Land Use Plan and is designed to be used with a series of county maps locating state and federally owned lands in the State. It explains the significance of these lands as a factor in the suitability analysis and describes how the state-wide inventory was compiled and mapped. In addition, the manual lists all state and federally owned lands in Maryland and briefly summarizes their relationship to the total land area of the State by county and region.

The preparation of this document was financed in part through a comprehensive planning grant from the Department of Housing and Urban Development, as administered by the Maryland Department of State Planning.

# Table of Contents

	<u>Page</u>
Preface	i
I. Introduction	1
II. State and Federal Lands in Maryland	3
III. Data Collection and Manipulation	9
A. Data Sources	9
B. Data Conversion	15
IV. Bibliography	17
V. Appendices	
A. State Maps, ranking from larges to smallest, by county and by region, the total land area and amounts of State owned, federally owned, and combined State and federally owned property.	18
B. Acreage Totals of State Owned Land in Maryland, by County.	35
C. Selective Summarization of State Owned Land by County.	36
D. Listing of State Owned Land in Maryland, by County.	37
E. Acreage Totals of Federally Owned Land in Maryland, by County.	57
F. Listing of U. S. Government, Real Property in Maryland, by County.	59
G. Key to Abbreviations Used in Property Descriptions.	68

## List of Figures

	<u>Page</u>
1. Counties Ranked by Size in Land Area, Largest to Smallest	19
2. Counties Ranked by Acres of State Owned Land, Largest to Smallest	21
3. Counties Ranked by Acres of Federally Owned Land, Largest to Smallest	23
4. Counties Ranked by Acres of Land Owned by the State and Federal Governments Combined, Largest to Smallest	25
5. Regions Ranked by Size in Land Area, Largest to Smallest	27
6. Regions Ranked by Acres of State Owned Land, Largest to Smallest	29
7. Regions Ranked by Acres of Federally Owned Land, Largest to Smallest	31
8. Regions Ranked by Acres of Land Owned by the State and Federal Governments, Largest to Smallest	33

## List of Tables

	<u>Page</u>
1. Total Amount of Land and Amount of State and Federally Owned Land in Each County	4
2. Regions of the State, by Counties	6
3. Total Amount of Land and Amount of State and Federally Owned Land, by Region	7
4. Ranking of Total Land Area to State and Federally Owned Land, by Region	7
5. Ranking of County Land Area Compared to a Ranking of State and Federally Owned Land, Largest to Smallest	8
6. State and Federal Lands, Owning Authority Code	14

## **Acknowledgements**

The following individuals and agencies provided valuable assistance in compiling and preparing the State and Federal Lands Inventory: William H. Riley, Chief, Supervisor of Assessments, Louis P. Alcamo, Supervisor of Tax Maps, and Robert L. Ward, Assistant Supervisor of Tax Maps, the Maryland Department of Assessments and Taxation; William P. Blackburn of the Maryland Department of General Services; Carlton Brooks, Acting Director of the Real Property Division, U.S. General Services Administration Region 3-R; Robert C. Davison, Chief, Materials and Research Division, Maryland State Highway Administration; and Warren Hodges, Chief, and Sam Crimy, Administrative Specialist, State Clearinghouse, Maryland Department of State Planning. We wish to extend our thanks for their cooperation and guidance.

## Preface

The legislation creating the Maryland Department of State Planning (Articles 41 and 88C, Annotated Code of Maryland) assigns to the Department the responsibility of preparing and keeping up-to-date "a plan or plans for the development of the State, which plan or plans collectively shall be known as the State Development Plan."

Based on its responsibility as stated above, numerous special studies and projects have been or are being completed by the Department of State Planning, including a study of the Chesapeake Bay, a study of State Wetlands, an Outdoor Recreation and Open Space Plan, and a Historic Preservation Plan.

In addition to the above studies, the Department of State Planning is currently preparing a State Development Plan; this plan aims to provide a coordinated basis to guide the future development of the State in such a way as to assure the general welfare and prosperity of the people of Maryland. It is to be based on studies of social, economic, and physical conditions and trends in the State and will examine these conditions and trends with the intention of establishing objectives within a goals-oriented framework. The plan as presently defined has two major elements, the Land Use Plan and the Human Resources Plan, in order to emphasize equally the best use of the State's physical resources and the well-being of its citizens.

The Land Use Plan will describe desirable general patterns for the development of land related facilities and services, as well as suggest policies for the management of the State's natural resources. It will include:

1. a statement of the goals, policies, standards and criteria upon which the plan is based; and
2. recommendations for the most desirable general pattern of land use within the State;
3. recommendations for the major transportation facilities and services within the State which are consistent with and supportive of the Generalized Land Use Plan;
4. recommendations for the major public facilities and services which are consistent with and supportive of the Generalized Land Use Plan;
5. recommendations for the actions required to implement the plan.

The methodology utilized for the development of the land use plan was based upon four assumptions.

1. that the State Land Use Plan sets the State Policy for utilization of its land resources, facilities, and services;
2. that the plan is based upon an evaluation of the State's characteristics, land resources, and citizens' needs and aspirations;
3. that priority selection must take place;
4. that the plan and process can have a substantial impact upon the future quality of life and growth of the State.

There are several methodological phases necessary to prepare the Generalized Land Use Plan. They are:

1. preliminary research and analysis
2. capability analysis
3. suitability analysis
4. goal and policy formulation
5. preliminary developments of land use plan alternatives
6. review of alternatives and final plan selection

The capability/suitability phases form the heart of the plan's methodology. They provide the information on which much of the other work is based. Within the context of the Land Use Plan, capability refers to the ability of land to support particular uses based upon the relevant physical characteristics of the land. Capability analysis involves the selection of those factors most important for specific land uses, and then by the consideration of physical constraints, identifies areas of the State which can best support those types of land use. The Department of State Planning has outlined the following parameters for the capability analysis:

1. percentage of slope as an indicator of topography
2. floodplain delineation
3. soil characteristics
  - a. agricultural productivity
  - b. erosion susceptibility
  - c. permeability
  - d. depth to bedrock
  - e. depth to water table
  - f. stability
4. wildlife and fish habitats
5. forests by type
6. geological setting
  - a. type
  - b. hardness
  - c. stability of cuts
  - d. durability

7. aquifers
8. mineral resources
9. unique natural features and scenic areas
10. surface water quality

On the other hand suitability refers to those variables, in addition to basic capability, which relate directly to private and public expenditures or facilities that are programmed over long periods and which can be utilized to determine areas equally capable of supporting various activities. The following factors are to be considered in the plan for the purposes of suitability analysis:

1. existing and proposed land use
2. existing and proposed sewer and water service
3. existing State and Federally owned lands
4. existing and proposed transportation facilities
  - a. airports
  - b. road intersections
  - c. pipe line rights of way
  - d. high voltage electric line rights of way
  - e. ship channels
  - f. rapid transit rights of way
5. existing local and regional plans
6. historical structures or areas

## **1 . Introduction**

The character, distribution, impact and potential for public benefit of publicly held property is of substantial importance in the final determination of the Generalized State Land Use Plan. Hence, an inventory of State and federally owned land is an essential element of the land suitability analysis.

The Land Use Plan will consider past and current public expenditures that have taken tangible form as part of the suitability analysis. Land is a major public investment, along with sewer and water service areas, and transportation facilities. In some ways the acquisition of public lands can be viewed as balancing private land use decision patterns by accentuating positive aspects and mitigating negative aspects of these patterns. However, a review of State and federal real property in Maryland demonstrated that they were not confined to state buildings such as hospitals or federal military installations, but that almost every part of the State also contained holdings of unimproved public land. This land had been purchased, defaulted, or given to the governments for some public purpose over the years and cannot be dismissed simply as a static non-taxable quantity. State and federally owned land can be leased for many purposes, thereby creating economic benefits for an area. More importantly, these unimproved properties can be developed with public facilities which in turn can drastically alter the level of activity associated

with the site or land areas. Left unimproved these properties are attractive to campers, hunters, and others seeking recreation or living in areas adjacent to them.

The presence of publicly held property can be a key variable in the development equation. It can either encourage or discourage development depending upon the relationship between the uses of the public and surrounding private property. Hence, in order to direct development, it is necessary to know not only where public land does and does not occur, but also what public agency owns it, what exactly it is used for, etc. For example, it would not be advisable to locate residential development around a military air base with a high traffic volume, whereas a similar development might occur advantageously around a major educational facility.

Those lands owned or controlled by municipalities, counties, private institutions, quasi-public organizations, or special districts were not included in this inventory at this time for a variety of reasons, which will be explained in detail in another section of this manual.

Extensive use was made of available public records to compile this inventory. Accordingly, the data compiled within this document may repeat errors embodied in the source data. Through the use of this material we hope the reader will be in a position to identify inconsistencies and refer their occurrence to the Department. The Department will make every effort to correct future tabulations and have the source data corrected.

## **2. State and Federal Lands in Maryland**

Some generalizations are possible about the characteristics of the State and federal property holdings on a Statewide basis. There are 272,755 acres of inventoried property owned by the State and 194,377 acres owned by the federal government in Maryland, out of a total 6,319,360 acres of land within the State (Table 1). Therefore, 4% of the total land area of the State is held by the State while 3% of the total land is owned by the Federal government.

Regionally, Western Maryland contains the largest percentage of State and federally owned land within its total land area, and the Upper Eastern Shore has the lowest percentage (Table 3). Table 4 illustrates that when the regions are ranked largest to smallest, the combined State and federal land acreage figures align in the same fashion even though the percentage figures are quite different. Table 5 depicts the relationship that exists when the counties are ranked by total land area and amounts of State and federally owned land. Only five counties, Garrett, Dorchester, Washington, St. Mary's and Calvert, rank in the same place for both determinations.

This tabular data above is illustrated on a series of State maps, by county and region, in Appendix A. Subsequent appendices contain acreage totals by county (Appendix 3), selective summary totals of acreage (Appendix C), listings of State owned land (Appendix D), totals and listings of federally owned land (Appendices E and F), and a key to abbreviations used in preceding property descriptions (Appendix G).

### **3. Data Collection and Manipulation**

#### **A. Data Sources**

All available maps or lists containing State and federal property were accumulated by the Department of State Planning staff. These included tax maps at 1" = 400' or 1" = 600', computerized listings of federal lands, inventories of State Highway Administration lands, and other similar kinds of materials. Each map and corresponding list were matched up to determine their internal accuracy. Due to the different sources of the data, discrepancies inevitably began to appear. Substantial amounts of time and effort were put into correcting these problems.

Lists were compiled of properties which could not be located. These lists were organized by county and by probable agency ownership. These lists were then distributed to members of the State Planning Coordination Committee for their help in determining location and ownership. Properties of less than 10 acres in size were omitted from these lists because it was felt that the potential importance of such small areas did not merit further investigation at that time. The only exception to this was State Highway Administration lands, because of their location at intersections of major highways or at key access points. Specific contacts both by mail and telephone were made where necessary to secure information.

There are three State agencies which are required to maintain records of State owned lands, and as such were the principal State contacts for this inventory. Article 81, Section 232 B of the Tax Laws of Maryland authorizes the Department of Assessments and Taxation to assess all real property and any improvements thereon located in the State and exempted from the payment of ordinary taxes as of July 1, 1971. This includes State, Federal, county and municipal property along with property held by religious or non-profit organizations.

The Secretary of General Services under Chapter 97, The Laws of Maryland 1970, Section 231 K, is required to maintain an inventory of all materials, supplies, and equipment (including land and buildings) owned by the State.

The Department of State Planning, Article 88C, Section 2(e), is to respond as a repository and clearinghouse for information on available real property (owned by the State, its agencies, and political subdivisions) for public use. Since the completion of this first inventory, the Department's responsibilities have been expanded to insure the comprehensive review by other State and county agencies of "excess" State property prior to their disbursement.

In addition, each State agency is charged with maintaining records of all real property under their ownership or management.

Often times the lists are incomplete, inaccurate or dated depending upon the dynamics of land transactions within the agency, the length of time

the property has been held, its location, and the date and method of the State's acquisition. These problems arose frequently and necessitated a time consuming cross checking.

Once all suitable data on State and federally owned lands in Maryland had been accumulated, the Department of State Planning's staff mapped these sites on a 1:63,360 scale, using the State Highway Administration's map series as a base. To save time, county outlines were not drawn upon the maps; instead, coordinate marks from the State Plane Coordinate System were used as locators. So little of each county would be encoded subsequently that further reference marks were thought to be unnecessary.

Mapping rules were evolved to handle the unique problems posed by each information source. However, it can be said that cross checking, combined referencing and other verification techniques consumed more time than any other aspect of the mapping phase. The rules for mapping were as follows:

1. Each institution, park, etc., was listed separately; and all the parcels of a single institution, park, etc., were given one encoding number. However, in cases where parts of the institution, park, etc., were widely separated (i. e., by greater than three miles), the parts were each given unique numbers.
2. In areas where the State Roads Commission owns a large number of relatively small parcels, such as along a section

of a highway, the parcels were given the same number and designated by a grouping of dots on the map.

3. State-owned land identified on the official county tax maps but not listed on the Assessment and Taxation Department's listing of tax exempt properties were mapped and encoded. The encoded property description included map, block and parcel numbers, department, location, and acreage if available.
4. For those cases where parcels were on the official tax lists but not indicated on the official tax maps, the approximate location was plotted if possible. However, those listings which had no locational information, i. e., no map, block, parcel number or description, were not mapped. In most cases, the size of these properties was very small, usually less than one-half acre.
5. All State Highway Administration's parcels of approximately 10 acres or larger which appeared upon any official county tax listing or on an official county tax map as State-owned property were checked against the State Highway Administration's extra property list of January 22, 1973. An attempt was made to verify if they were still held by the State Highway Administration. If verified, the encoding was changed from State of Maryland (Code 10) to State Highway Administration (Code 22). If not verifiable, they were still mapped as Code 10 property.

6. Dotted lines replaced solid property boundary lines when the exact location of the boundary could not be determined. (See Prince George's County map). Dotted lines were also used within a property bordered by a solid line when a source indicated that the property was divided into more than one segment. This notation was also used to indicate that adjoining tax maps did not show continuous State ownership where it appeared to exist from other sources.
7. Green lines were used to denote federal property, black lines denoted State-owned property.
8. State properties were assigned agency codes between 10 and 49, federal properties were assigned codes between 50 and 99 (for complete listing see Table 6).

It should be noted that in the past various State agencies held title and deed to various tracts of land. More recently the General Assembly has transferred this authority to The Board of Public Works. Therefore, many records still reflect "ownership" residing with a specific agency. Nonetheless, the code established for State lands in Table 6 reflects the State agency which manages or uses the given tract of land.

71	Department of Treasury

In retrospect, it appears that the Department of State Planning's staff was able to locate approximately 80% of total sites inventoried by the State Highway Administration. Usually, those not locatable were small or their location was complicated by insufficient information. Federal lists appeared at first to be of marginal utility. However, after contacting agencies for more detailed information, the staff was able to locate from these lists approximately 80% of the sites located within the State.

The combined official tax maps and tax listings by county proved to be more variable as a resource. The more rural counties (where the rate of subdivision, land scales, etc., was relatively low) presented fewer problems and generally allowed 95% + of the probable public property to be mapped; in the more urbanized counties, the number of mapable properties dropped to approximately 70% of the total available, because of map scale and size of property.

B. Data Conversion:

Once the State and Federal lands were actually determined and mapped, the following method was developed to convert the base maps into a numerical format suitable for computer encoding.

Sample:

County Number	Owning Authority Code	Real Property Number Code
01-24	10-26 (State) 50-71 (Federal)	001 through maximum needed for each county

1. County Number

Alphabetical ordering by county with Baltimore City  
in the 04 position.

2. Owning Authority Code

Table 6 - See for complete listing.

Numbers not used provide room for expansion.

3. Real Property Number

Maximum per county 999, listing in no pre-determined order.

Complete listing of State and federally owned land, with  
appropriate encoding numbers, is found in Appendix C and  
Appendix E, respectively.

The county number is not indicated on the maps to save space, but  
is pre-set for each card. Every mapped item will appear in the library file.  
There is a one-to-one correspondence between mapped and library items.  
Library items will contain the full number series (including the two digit  
county number). Of the 80 spaces available for data encoding, this full  
number will include seven spaces followed by one space. The next 11 spaces  
are allotted to the acreage number (00380.00AC), and the remaining 61  
spaces will be devoted to a description of the property. Appendix G is a  
Key to the abbreviations used in these descriptions.

## Appendix B

### Acreage Totals of State Owned Land in Maryland, by County

Allegany County	45,111.58 Acres
Baltimore County	15,449.44 Acres
Anne Arundel County	7,768.27 Acres
Baltimore City	1,368 Acres
Calvert County	1,004.40 Acres
Caroline County	4,502.84 Acres
Carroll County	3,000 Acres
Cecil County	5,281 Acres
Charles County	6,224.42 Acres
Dorchester County	15,161 Acres
Frederick County	11,790.22 Acres
Garrett County	77,422.40 Acres
Harford County	4,647.81 Acres
Howard County	7,504.47 Acres
Kent County	3,115.0 Acres
Montgomery County	6,679.29 Acres
Prince George's County	7,441.92 Acres
Queen Anne's County	3,535 Acres
St. Mary's County	2,312.64 Acres
Somerset County	20,528.41 Acres
Talbot County	230 Acres
Washington County	16,540.88 Acres
Wicomico County	3,807 Acres
Worcester County	15,547.53 Acres
Total	272,755 Acres (Approximately 430 Square Miles)
